Observation :

5] Configure Web server, DNS within a LAN.

Step 1: Create a topology like this.

Step 2: Configure web server with IP address and DNS server.

Step 3: Configure DNS server with IP address.

Step 4: Enable DNS service and add A record records, give your domain name and IP address as.

Step 5: Enable HTTP services and add the web page.
(Built in web page is there by default. So no need to add new one:)

Step 6: Configure hosts ip address and DNS address also.

Step 7: Verify the above connection using cmd by pinging the domain name.

Output :-

PC> ping www.mysite.com
Pinging 10.0.0.20 with 32 byte of data:

Reply from 10.0.0.20 byte = 32 time = 6 ms TTL = 128
Reply from 10.0.0.20 byte = 32 time = 63ms TTL = 126
:
:
:

ping statistic for 10.0.0.20:
packet : sent = 4, received = 4, lost = 0, (0% loss),
Approximate round trip times in millisecond
Minimum = 6ms, maximum = 63 ms, Average = 41 ms.
